Toronto College
of Dental Hygiene and Auxiliaries^{inc.}

Rationale for these Guidelines

The Toronto College of Dental Hygiene and Auxiliaries Inc. (TCDHA) is committed to the safety and wellbeing of our students, staff, faculty, clients and guests. The purpose of this safety plan is to ensure preparedness, enabling students, faculty and staff to respond effectively to various emergencies including fire, medical and threat to life or safety. TCDHA will work within both provincial and local health guidelines in Ontario and will remain updated on all changing policies and procedures.

Any students, staff, faculty, clients and/or guests experiencing potential COVID-19 related symptoms cannot enter the building. For more information on COVID-19 and other respiratory illnesses, please review the following options:

- Visit Health811 Ontario:
<https://health811.ontario.ca/static/guest/home>
- Visit a physical assessment site close to you
- Virtual visit with a physician or nurse
- Take the Ministry of Ontario Covid-19 self-assessment: <https://covid-19.ontario.ca/self-assessment/>
- If you have questions related to COVID 19 testing and isolation guidelines, please call the Provincial Testing and Isolation Information line at 1-888-777-0730
- <https://www.ontario.ca/page/public-health-measures-and-advice>

Fire Safety

TCDHA adheres to the Ontario Fire Code (O. Reg. 213/07: FIRE CODE) and regulations set out by the Ontario Career Colleges Act, 2005.

Although the Ontario Fire Code only requires fire drills for Supervisory Staff at least once during a 12-month period, TCDHA ensures to complete Fire Drills every semester including staff, faculty and students. This is to ensure students are aware of the protocol for fire drills, emergency exits and designated evacuation assembly areas.

Fire Drill

The steps for a Fire Drill are included in the Fire Drill Guide and are posted on our student portal, faculty room and front desk (upon request).

During a Fire Drill, a Fire Drill Report (**Appendix A**) is completed and filed in the Health and Safety Binder. The Health and Safety Officer is responsible for making suggestions or bringing forward concerns regarding the outcome of the drill. This will be discussed with the Upper Management Team and changes will be implemented before the next fire drill.

Fire Safety Equipment

TCDHA ensures all fire and safety equipment is checked regularly to ensure it is in working order. This includes:

Fire Extinguishers (Monthly inspections by Health and Safety Officer and Annually by Advanced Fire Prevention)

Emergency Lighting (Annually by Advanced Fire Prevention)

Fire Alarms (Annually by Advanced Fire Prevention)

Sprinkler System (Annually by Advanced Fire Prevention)

Fire Safety Plan

The Fire Safety plan is created and updated by Apollo Fire Systems. The Fire Safety Plan is also approved by Toronto Fire Services. The Fire Safety Plan is

Toronto College
of Dental Hygiene and Auxiliaries^{inc.}

reviewed annually and when any changes to the building are made (such as the layout of the building). This is to ensure all Fire Exit Maps are updated and current.

The Fire Safety Plan is kept in the Fire Safety Box located in the front entrance of the college as per Municipal Code Ch. 470-3.

Quality Assurance-Radiography

Inspection

TCDHA completes annual X-Ray Inspections from AVA Environmental Consultants (28 Vanley Crescent Main Campus) and Sinclair Dental (2727 Steeles Alternative Training Facility). The purpose of these inspections is to ensure all X-Ray equipment and surrounding area is in compliance with the Ministry of X-Ray Inspection and Healing Arts Radiation Protection Act, R.S.O. 1990, c. H.2.

The Certificate of Inspection is kept in each clinic in a frame. All supporting documents are kept in each dispensary.

Retakes

Radiographs and radiographic retakes are prescribed only by a member under the Radiation Act, such as a Dentist. These individuals are the only ones who can prescribe a retake and are trained to follow the ALARA principle (As Low As Reasonably Achievable). This concept in radiation safety emphasizes minimizing radiation exposure by using all reasonable methods.

Retake Process

The dentist will inform the student of any retakes which are all tracked through the DDS Radiographic Image Approval Form and then transferred on to the Radiographic Needs Prescription. This is tracked per semester and is kept permanently for record.

Students are expected to sign up with their RDH faculty for an observation and chairside assistance while exposing their radiographic retake to support the student and ensure client safety.

Toronto College
of Dental Hygiene and Auxiliaries^{inc.}

Step Wedge

This facility participates in daily testing (step wedge) for quality assurance.

Phosphorous Plates

Every semester, week 19, the Phosphorus Plates are exposed on a Dexter to see if there are any imperfections. This is done to ensure quality control and to prevent retakes due to non-diagnostic films.

Office Safety Checklist

The Health and Safety Officer completes regular inspection of the entire school. This inspection is done on a monthly basis and includes checking the fire extinguishers, emergency lighting, all emergency exits are free of any obstacles, any safety concerns on the ground or in the hallways throughout the college, checking that the Fire Safety Plan is available in the Fire Safety box at the front of the college, checking the defibrillators are stocked and not expired, emergency kits in the clinic and emergency eye wash stations are functioning.

The form completed is called the Office Safety Checklist and is filed in the Health and Safety Binder (**Appendix B**).

Defibrillator

As part of the Office Safety Checklist (**Appendix B**) the Defibrillators located on the main floor outside of Clinic 1 and on the 2nd floor outside of the elevator. This is checked monthly and the following is reviewed to ensure it is in working order, is present and is not expired:

- Pads (Adult & Child)
- Batteries
- Razor
- Cloth
- Instructions

Toronto College
of Dental Hygiene and Auxiliaries^{inc.}

Medical Emergency Kits (All Clinics)

Medical Emergency kits are checked by a dispensary representative monthly. This check includes ensuring items are not expired and all items are present. This inspection includes checking the Oxygen Tank. Dispensary is required to complete the Medical Emergency Monthly Checklist (**Appendix C**) and provide the completed list to the Health and Safety Officer to be filed in the Health and Safety Binder. All items which are within expiry (at least 1-month prior to the expiry date) must be brought to the attention of the Health and Safety Officer to be ordered and picked up prior to the expiry date.

Oxygen Tank

The Oxygen Tank is inspected monthly as part of the Medical Emergency Kit Checklist. The Dispensary staff will check the dial on the Oxygen tank to ensure it is full (within the green) and it is stocked appropriately with a new mask and tubing.

The Oxygen Tank is fully inspected annually by MagGas Medical Inc. A tag is placed directly on the tank and a report is filed in the Health and Safety Binder.

In the event of an emergency, if a oxygen mask or tubing is used, it will be replaced immediately after.

Eye Wash Station

The Eye Wash Stations are checked Monthly to ensure that they are functioning. In Clinic 1, one station is a bottle that is also checked monthly to ensure that the bottle is not expired.

This is part of the Office Safety Checklist that is completed upon monthly inspection, and is filed in the Health and Safety Binder.

TCDHA Medical Emergency Orientation

Students, Faculty and Staff once per semester are to complete a TCDHA Medical Emergency Orientation and Evaluation. The Orientation is 30-60 minutes (Semester 1 students may be longer as they are new to the facility) and includes the following:

- Identification of the location and content of the following stations:
 - AED
 - Medical Emergency Kit
 - First Aid Kit
 - Oxygen Tanks
 - Eye wash stations
 - Emergency Exits
 - Incident Report Forms

The Evaluation is based on the location and contents of the above topics to ensure all students and faculty are aware of the medical resources and protocols at TCDHA in the event of an emergency covers. Faculty, staff and students must score 100% on this evaluation.

Incident Report Forms

Incident Report forms are kept in each dispensary and on the student portal under Faculty resources to be completed in the event of an injury or a person who displays aggressive, violent or in appropriate behavior.

Incident Report A

This Incident Protocol is to be followed in the event of an injury occurring at the Toronto College of Dental Hygiene and Auxiliaries Inc. Following this protocol helps to ensure that staff members are operating within the law in a manner that helps to protect staff and the college from negative repercussion and/or potentially liability.

To be followed if any person at the Toronto College of Dental Hygiene and Auxiliaries Inc. suffers an injury (or reports having suffered an injury) or experiences a medical emergency, while on school property.

Incident Report B

This Incident Protocol is to be followed in the event of a person at the at the Toronto College of Dental Hygiene and Auxiliaries Inc. displaying hostile, aggressive, violent and/or inappropriate behavior. Following this protocol helps to ensure that staff members are operating within the law in a manner that helps

Toronto College
of Dental Hygiene and Auxiliaries^{inc.}

to protect staff and the college from negative repercussion and potentially liability.

To be followed if any person at the Toronto College of Dental Hygiene and Auxiliaries Inc. behaves inappropriately while on school property.

Puncture Wounds

The Puncture Wound Protocol is available in all clinics and on the student portal. This shares a step-by-step process in response to exposure to a client's bodily fluids.

Client Risk Assessment Form "A": Consent from the Client to seek blood work testing

Client Risk Assessment Form "B": Taken with the client to their family physician to receive testing for HBV, HCV and HIV.

Exposure to Bodily Fluids (Student/Faculty/Staff): This is to be completed in all instances of exposure to gather details surrounding the incident.

Lockdown Procedure

TCDHA prioritizes the safety of our faculty, staff and students. For this reason, practice lockdowns are completed once per semester. There are two levels of Lockdowns:

Hold & Secure

This is a response to a threat outside of the school but within the area around the school. All school functions will continue however the exterior doors will be locked (people can not enter or exit the building).

Lockdown

A full lockdown is initiated by a serious threat within the school. This may include:

- An active shooter or someone with a weapon
- Threats or Crimes
- Natural Disasters

Toronto CollegeTM

of Dental Hygiene and Auxiliaries^{INC.}

The steps for a Lockdown are included in the Lockdown Guide and are posted on our student portal, faculty room and front desk (upon request).

COVID-19/Pandemic Virus Protocol

If you have any of the COVID-19 symptoms listed below, assume that you may have the virus and may be contagious:

- Any one or more of:
 - fever or chills
 - cough
 - shortness of breath
 - decreased or loss of taste or smell
- Any two or more of:
 - runny nose or nasal congestion
 - headache
 - extreme fatigue
 - sore throat
 - muscle aches or joint pain
 - gastrointestinal symptoms (such as vomiting or diarrhea)

If you develop severe symptoms requiring medical attention, such as shortness of breath or chest pain, call 911 and inform them that you may have COVID-19.

What to Do: COVID-19

If Students, staff, faculty, clients and guests are experiencing symptoms of COVID-19, they must stay home to prevent transmission to others.

You should stay home until **all** of the following apply to you:

- Symptoms have improved for at least 24 hours (or 48 hours if you had nausea, vomiting and/or diarrhea).
- You do not have a fever.
- You have not developed any additional symptoms.

Once symptoms have improved, please do the following for at least 10 days as extra protection against COVID-19 and other respiratory viruses:

- Wear a well-fitted mask in public settings.
- Avoid non-essential activities where you need to remove the mask.

Toronto CollegeTM

of Dental Hygiene and Auxiliaries^{INC.}

- Avoid non-essential visits to anyone who is immunocompromised or may be at higher risk of illness including visits to highest risk settings (hospitals or long-term care homes).

Protocols and Guidelines During Covid-19

TCDHA has designed and implemented guidelines that are in place to protect students, staff, faculty, clients and guests upon arrival to the college.

Client Entry:

- a. Students will ask their client pre-screening questions the night before the client's appointment. If a client says 'Yes' to any of the screening questions the student explains they cannot enter the college for their appointment and recommends they speak with their physician. If the client says 'No' to all of the questions they will be allowed to enter the college.
- b. Once inside they will go straight to the check-in desk and sanitize their hands.
- c. TCDHA has implemented Scattered entry for clients, ensuring that they do not all enter the clinic at the same time. The upstairs clinic starts 30 minutes after the downstairs clinic to ensure waiting areas following social distancing guidelines.
- d. Clients are also provided with a chair number to ensure they are brought directly to their correct chair. The monitor assisting with the clinic will come out and call their number to bring them inside.

Students, Staff, Faculty, Clients and Guests

All students, staff, faculty and guests must:

- a. Practice proper hand washing; techniques are posted on the washroom doors and hand sanitizer bottles are placed throughout the college. TCDHA has implemented a 'COVID-19 Response Hand Hygiene Protocol' manual explaining hand hygiene protocols along with *How to Wash Hands* and *How to Use Hand Rub*. This manual states that anyone entering the building must conduct proper ABHR (Alcohol Based Hand Rub; Hand Sanitizer).

Toronto College[™]
of Dental Hygiene and Auxiliaries^{inc.}

- b. Practice Social Distancing when possible.

Environmental Cleaning

TCDHA has implemented several cleaning procedures and staff use a combination of sanitization wipes and sprays to ensure all high touched areas (knobs, elevator buttons, desks and chairs) are cleaned regularly. If there is an increase in students in a designated area (ex. during final exams), surfaces (desk and chair) are wiped as soon as the student leaves the room.

of Dental Hygiene and Auxiliaries^{inc.}

Appendix A Fire Drill Report

APPENDIX D 1 - Sample Fire Drill and/or Incident Report					
Date:		Time:		Location:	
Comprehensive Drill		Silent Drill		Table Talk	Other
Instructions Each department head, manager or designate is responsible for monitoring employee responses and assessing building features during every fire drill and at any time the fire alarm audible signal activates. Forward this completed form after each drill to (insert name of person and department)					
Section 1 Assessment of persons discovering / responding to fire					
Describe fire drill scenario, fire incident or fire alarm occurrence:					
Simulated or Actual Activities		Yes	No		
Were people in immediate danger evacuated?				Zone of origin evacuated?	
Were doors closed and latched to confine the fire and reduce smoke spread?					
Was the fire alarm manually activated (if the scenario required this action)?					
Was the fire department called or switchboard notified as required by procedures?					
Was an attempt made to extinguish the fire?				Was attempt appropriate?	
Did sufficient staff respond and evacuate endangered occupants in an organized and timely manner?					
Was scene supervision appropriate?				Were instructions clear?	
Horizontal evacuation conducted?				Vertical Evac. Conducted?	
Comments/observations/recommendations on emergency responses:					
Assessment of specialized Supervisory Staff responses				Yes	No
Was the fire department notified by phone promptly and correctly?					
Were verbal instructions correct and clearly stated over the voice communication system?					
Did designated staff respond correctly to provide fire department assistance and access?					
If "No" was answered for question(s) above, provide comments/observations/recommendations:					
Section 2 Did the following features operate properly in your area?				Yes	No
A) fire alarm pull station (where applicable) and audible fire alarm devices					
B) voice communication system (voice messages were audible)					
C) self-closing doors closed and latched upon fire alarm system activation					
D) electro-magnetic locking devices released locked doors upon fire alarm system signal					
E) fire hose stations, fire extinguishers and/or sprinklers (where applicable)					
Section 3 Did employees respond properly upon hearing the fire alarm signal and voice communication instructions?				Yes	No
A) checked rooms and area for fire and closed doors immediately					
B) designated staff responded to the fire area to assist with evacuation					
C) hazardous equipment safely shut down where appropriate (i.e. oxygen, dryers)					
D) corridors were clear and unobstructed					
If "No" was answered for question(s) above, provide comments/observations/recommendations:					
Print Name:		Signature:		Date:	

Toronto CollegeTM

of Dental Hygiene and Auxiliaries^{INC.}

Appendix B **Office Safety Checklist**

OFFICE SAFETY CHECKLIST - 28 Vanley Crescent

Inspector: Crystal Lewis	Survey Date:	YES	NO	COMMENTS
1. Are exit signs illuminated and visible?				
2. Are corridors and exits free from obstructions and unlocked?				
3. Is the Emergency Evacuation Map & Fire Emergency Procedure posted?				
4. Is the Fire Safety Plan in the box?				
5. Is there no obvious damage to sprinklers?				
6. Is the Smoke Alarm working well?				
7. Are fire extinguishers easily accessible, checked monthly, and operational?				
8. Is emergency lighting available?				
9. Is a defibrillator readily available and stocked appropriately?				
10. Is an Emergency Kit readily available and stocked appropriately?				
11. Is 'No Smoking' sign posted visibly?				
12. Are the Hand Sanitizers working well and the Hand Washing Instructions posted?				
13. Is the Janitorial room organized and without combustible material?				
14. Is Emergency Eye/Face Wash available at Lab and Clinic?				
15. Have all checklists in clinics & next to defibrillators been completed? (everything is present & not expired)
